

Mealbox.

Temperature

1. Ideal temperature: 25-27 degrees Celsius (77-81 degrees Fahrenheit).
2. The LED in the Mealbox will turn red when the temperature exceeds or falls below the ideal temperature range.
3. If left for a long time below 21 degrees Celsius, mealworms are likely to die.

Humidity

1. Ideal humidity: around 50%.
2. The LED in the Mealbox will turn red when the humidity exceeds or falls below the ideal humidity range.
3. Pay special attention during rainy seasons to prevent excessive humidity.
4. If left for a long time with high humidity, mealworms are likely to die.

Mealworm Density

1. Aim for 50% mealworm density on the surface area of the mealbox.

Food

1. The main food source is sawdust. Fill each white box with 3-4 cm (1-1.5 inches) of sawdust.
2. Occasionally provide vegetables as a source of hydration.
